PROGRAMME:B.Sc.PHYSICS

ProgrammeOutcomes

PO1:

Acquireadequateknowledgeofthesubject**PO2**

: Craft a foundation for higher learning**PO3:**

Beinitiatedintothebasicsof research**PO4:**

Imbibesoundmoralandethicalvalues

PO5: Become consciousofenvironmentalandsocietalresponsibilities

PO6: Attainskillsforcommunicationandcareer

PO7: Learntoleratediverseideasanddifferentpointsofview

PO8: Becomeempoweredtofacethechallengesofthechanginguniverse

PROGRAMME:B.Sc.PHYSICS

CourseOutcomes

1:Understandthebasicconceptsof

methodologyofscienceandthefundamentalsofmechanics,propertiesofmatterandelectrodynamics,

MathematicalPhysics.

2:Understand the theoretical basis of Mathematical Physics,quantum mechanics,relativisticphysics, nuclear physics, optics, spectroscopy, solid state physics, astrophysics, statisticalphysics,photronicsandthermodynamics

3: Understand and apply the concepts of electronics in the designing of different analog anddigital circuits

4:Understandthebasicsofcomputerprogrammingandnumericalanalysis

5: Apply and verify theoretical concepts through laboratory experiments

COURSE STRUCTURE OF UG PHYSICS PHYSICS

HONOURSPAPERS:

Core course – 15

_____ papers

Marks per paper – 100

Credit per paper – 4

Teaching hours per paper – 45 hours for theory and 30 hours for practical

SEMESTER-I
CORE-I:PAPER-I
MATHEMATICAL PHYSICS-I:Credit-3

CO1

Basic understanding of Differential equations and their solutions, conceptual understanding of calculus.

CO2 Basic understanding of vector calculus and its differentiation.

CO3 Use of vector calculus to understand vector integration. Dirac delta function and its properties. CO4

Understanding of orthogonal curvilinear coordinates and its application in vector differentiation. CO5

To Understand the basic algorithm in application of functional algebra and error analysis.

UNIT-I

Calculus-I: Plotting of functions, Intuitive ideas of continuous, differentiable functions and plotting of curves, Approximation: Taylor and binomial series (statements only), First Order Differential Equations and Integrating Factor, Second Order Differential Equations: Homogeneous Equations with constant coefficients, Wronskian and general solution, Statement of existence and Uniqueness Theorem for Initial Value Problems, Particular Integral.

Calculus-

II: Calculus of functions of more than one variable: Partial derivatives, exact and inexact differentials. Integrating factor with simple illustration, Constrained Maximization using Lagrange Multipliers,

UNIT-II

Vector algebra: Recapitulation of vectors: Properties of vectors under rotations. Scalar product and its invariance under rotations, Vector product, Scalar triple product and their interpretation in terms of area and volume respectively, Scalar and Vector fields.

Vector Differentiation:

Directional derivatives and normal derivative, Gradient of a scalar field and its geometrical interpretation, Divergence and curl of a vector field, Del and Laplacian operators, Vector identities.

UNIT-III

Vector Integration: Ordinary Integrals of Vectors, Multiple integrals, Jacobian, Notion of infinitesimal line, surface and volume elements, Line, surface and volume integral of Vector fields, Flux of a vector field, Gauss 'divergence theorem, Green's and Stokes Theorems and their applications (no rigorous proofs) **Dirac Delta function and its properties:** Definition of Dirac delta function. Representation as limit of a Gaussian function and rectangular function, Properties of Dirac delta function.

UNIT-IV

OrthogonalCurvilinearCoordinates:Orthogonal Curvilinear Coordinates, Derivation of Gradient,

Divergence,CurlandLaplacianinCartesian,SphericalandCylindricalCoordinateSystems,Comparisonofvelocityand accelerationincylindricalandsphericalcoordinatesystem.

TextBooks:

1. Mathematical Methods for Physicists, G.B.Arken, H.J.Weber, F.E.Harris(2013,7thEdn.,Elsevier)
2. AdvancedEngineeringMathematics,ErwinKreyszig(WileyIndia)

Referencebooks:

1. MathematicalPhysicsC.Harper(PrenticeHallIndia)
2. ComplexVariable:Schaum'sOutlines SeriesM.Spiegel(2ndEdition,Mc-GrawHillEducation)
3. Complexvariablesandapplications,J.W.BrownandR.V.Churchill
4. MathematicalPhysics,SatyaPrakash(SultanChand)
5. MathematicalPhysics,B.D.Gupta(4thedition,VikasPublication)
6. MathematicalPhysicsandSpecialRelativity,M.Das,P.K.JenaandB.K.Dash(SrikrishnaPrakashan)
7. MathematicalPhysics–H.K.Das,Dr.RamaVerma(S.ChandPublishing)
8. MathematicalPhysics,B.S.Rajput,(PragatiPrakashana)

CORE-I:PAPER-I

LAB:Credit-1

TheaimofthisLabisnotjusttoteachcomputerprogrammingandnumericalanalysisbuttoemphasizeitsroleinsolving problemsinPhysics.

- . Highlights the use of computational methods to solve physical problems
- . Evaluation and analysis on the programming but on the basis of formulating the problem
- . Aim at teaching students to construct the computational problem to be solved
- . Students can use anyone operating system Linux or Microsoft Windows

Introduction and Overview: Computer architecture and organization, memory and Input/output devices. Basics of scientific computing: Binary and decimal arithmetic, Floating point numbers, algorithms, Sequence, Selection and Repetition, single and double precision arithmetic, underflow and overflow emphasize the importance of making equations in terms of dimensionless variables, Iterative methods. Algorithm Errors and error Analysis:

Truncation and round off errors, Absolute and relative errors, Floating point computations. Systematic and Random Errors, Propagation of Errors, Normal Law of Errors, Standard and Probable Error.

Review of C and C++ Programming: Introduction to Programming, constants, Variables and Fundamentals of data types, operators and Expressions, I/O statements, `scanf` and `printf`, `cin` and `cout`, Manipulators for data formatting, Control statements (decision making and looping statements) (If Statement, If else Statement, Nested If structure, Else If Statement, Ternary operator, Goto Statement, Switch Statement. Unconditional and Conditional Looping. While Loop, Do-While Loop, FOR Loop, Break and Continue Statements. Nested Loops), Arrays (1D and 2D) and strings, user defined functions, Structures and Unions, Idea of classes and objects.

Programs: Sum and average of a list of numbers, largest of a given list of numbers and its location in the list, sorting of numbers in ascending/descending order, Binary search.

Random number generation: Area of circle, area of square, volume of sphere, value of π .

Reference Books:

1. Introduction to Numerical Analysis, S.S. Sastry, 5th Edn., 2012, PHI Learning Pvt. Ltd.
2. Schaum's Outline of Programming with C++, J. Hubbard, 2000, McGraw-Hill Pub.
3. Numerical Recipes in C: The Art of Scientific Computing, W.H. Press et al, 3rd Edn. 2007, Cambridge University Press.
4. A first course in Numerical Methods, U.M. Ascher and C. Greif, 2012, PHI Learning.
5. Elementary Numerical Analysis, K.E. Atkinson, 3rd Edn., 2007, Wiley India Edition.
6. Numerical Methods for Scientists and Engineers, R.W. Hamming, 1973, Courier Dover Pub.
7. An Introduction to Computational Physics, T. Pang, 2nd Edn., 2006, Cambridge Univ. Press.

SEMESTER-II

CORE-I:PAPER-

IIMECHANICS:Credit-

3

CO-1 To Learn the basic concepts of Rigid body dynamics, Radius of Gyration, Moment of Inertia, Non-Inertial Systems

CO-2 To Understand the concept of Elasticity, Fluid motion and Types of Vibration

CO-3 To understand the concept of Newtonian theory through Gravitation, Central force motion, Kepler's laws, G PS

CO-4 To learn the concept of Special theory of Relativity, Michelson-Morley experiment, Lorentz transformation, Relativistic Doppler effect.

CO-5 Apply the basic concepts of Mechanics in experiments.

UNIT-I

Rotational Dynamics: Centre of Mass, Motion of CoM, Centre of Mass and Laboratory

frames, Angular momentum of a particle and system of particles, Principle of conservation of angular momentum, Rotation about a fixed axis, Moment of Inertia, Perpendicular and Parallel Axis Theorems, Routh Rule, Calculation of moment of inertia for cylindrical and spherical bodies, Kinetic energy of rotation, Euler's Equations of Rigid Body motion, Motion involving both translation and rotation. Moment of Inertia of a Flywheel.

Non-Inertial Systems: Non-

inertial frames and fictitious forces, uniformly rotating frame, Laws of Physics in rotating coordinate systems, Centrifugal force, Coriolis force.

UNIT-II

Oscillations:

Damped oscillation. Equation of motion and solution (cases of oscillatory, critically damped and over-damped) Forced oscillations: Transient and steady states; Resonance, sharpness of resonance; power dissipation and Quality Factor, Bar Pendulum, Kater's Pendulum

Elasticity: Relation between Elastic constants, Twisting torque on a Cylinder or Wire, Bending of beams, External bending moment, Flexural rigidity, Single and double cantilever

Fluid Motion: Kinematics of Moving Fluids: Poiseuille's Equation for Flow of a Liquid through a Capillary Tube, Surface tension, Gravity waves and ripples

Viscosity: Poiseuille's Equation for Flow of a Liquid with corrections.

UNIT-III Gravitation and Central Force Motion: Law of gravitation, Gravitational potential energy, Inertial and gravitational mass, Potential and field due to spherical shell and solid sphere, Motion of a particle under a central force field, Two-body problem and its reduction to one-body problem and its solution, Differential Equation of motion with central force and its solution, The first Integrals (two), Concept of power law potentials, Kepler's Laws of Planetary motion, Satellites, Geosynchronous orbits, Weightlessness, Basic idea of global positioning system (GPS).

UNIT-IV

Special Theory of Relativity: Michelson-Morley Experiment and its outcome, Postulates of Special Theory of Relativity, Lorentz Transformations, Simultaneity and order of events, Lorentz contraction, Time dilation, Relativistic transformation of velocity, Frequency and wave number, Relativistic addition of velocities, Variation of mass with velocity, Massless Particles, Mass-energy Equivalence, Relativistic Doppler effect, Relativistic Kinematics, Transformation of Energy and Momentum.

Text Books:

1. Mechanics, D.S. Mathur (S. Chand Publishing)
2. Introduction to Special Relativity, R. Resnick (John Wiley)

Reference Books:

1. Introduction to Mechanics Daniel Klapnner and Robert Kolenkow, McGraw Hill.
2. Mechanics by K.R. Simon
3. Mechanics, Berkeley Physics, vol. 1, C. Kittel, W. Knight, et al (Tata McGraw-Hill)
4. Physics, Resnick, Halliday and Walker (8/e. 2008, Wiley)
5. Theoretical Mechanics - M.R. Spiegel (Tata McGraw Hill).
6. Feynman Lectures, Vol. I, R.P. Feynman, R.B. Leighton, M. Sands (Pearson)
7. Mechanics - M. Das, P.K. Jena and R.N. Mishra (Srikrishna Publications)
8. Classical Mechanics, Gupta Kumar & Sharma, (Pragati Prakashan)
9. Classical Mechanics, J.C. Upadhyaya, (Himalaya Publishing Home)

CORE-I: PAPER-II

LAB: Credit-1

(Minimum 4 experiments are to be done):

1. To study surface tension by capillary rise method.
2. To determine the height of a building using a Sextant.
3. To study the Motion of Spring and calculate (a) Spring constant, (b) g and (c) Modulus of rigidity.
4. To determine the Moment of Inertia of a Flywheel.
5. To determine Coefficient of Viscosity of water by Capillary Flow Method (Poiseuilles method).
6. To determine the Modulus of Rigidity of a Wire by Maxwell's needle.
7. To determine the value of g using Bar Pendulum.
8. To determine the value of g using Kater's Pendulum.

Reference Books:

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practical's, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers.
3. A Text Book of Practical Physics, I. Prakash and Ramakrishna, 11th Edn, 2011, Kitab Mahal.

SEMESTER-III

CORE-I:PAPER-III ELECTRICITY AND MAGNETISM: Credit-3

- CO-1 To understand the basic concepts of Electricity and Magnetism
- CO-2 To Understand the various phenomena in Electricity and Magnetism CO-3
- CO-4 To Explain the Dynamics of Charged Particles CO-5
- To Apply the acquired knowledge in Experiment.

UNIT-1

Electric Field and Electric Potential

Electric field: Electric field lines, Electric flux, Gauss Law with applications to charge distributions with spherical, cylindrical and planar symmetry, Conservative nature of Electrostatic Field. Electrostatic Potential, Potential and Electric Field of a dipole, Force and Torque on a dipole, Potential calculation in different

simple cases, Laplace and Poisson equations, The Uniqueness Theorem, Method of Images and its application to (1) Planar Infinite Sheet and (2) Sphere.

Electrostatic energy of system of charges, Electrostatic energy of a charged sphere, Conductors in an electrostatic field, Surface charge and force on a conductor.

UNIT-II

Magnetic Field: Magnetic Force, Lorentz Force, Biot-Savart's Law, Current Loop as a Magnetic Dipole and its Dipole Moment (analogy with Electric Dipole), Amperes Circuital Law and its application to (1) Solenoid (2) Toroid (3) Helmholtz coil, Properties of curl and divergence, Vector Potential, Ballistic Galvanometer: Torque on a current loop, Current and Charge Sensitivity, Electromagnetic damping, Logarithmic damping, CDR.

UNIT-III

Dielectric Properties of Matter: Electric Field in matter, Polarization, Polarization Charges, Electrical Susceptibility and Dielectric Constant, Capacitor (parallel plate, spherical, cylindrical) filled with dielectric, Displacement vector D , Relations between E , P and D , Gauss Law in dielectrics. Magnetic Properties of Matter: Magnetization vector (M), Magnetic Intensity (H), Magnetic Susceptibility and Permeability, Relation between B , H , M , Ferromagnetism, B - H curve and hysteresis. Electromagnetic Induction: Faraday's Law, Lenz's Law, Self-Inductance and Mutual Inductance, Reciprocity Theorem, Energy stored in a Magnetic Field, Introduction to Maxwell's Equations.

UNIT-IV

Electrical Circuits: AC Circuits: Kirchhoff's laws for AC circuits, Complex Reactance and Impedance, Series LCRC Circuit: (1) Resonance (2) Power Dissipation (3) Quality Factor, (4) Band Width, Parallel LCRC Circuit.

Network Theorems: Kirchoff's law for electrical circuits, Ideal Constant-voltage and Constant-current Sources.

Network Theorems: Thevenin theorem, Norton theorem, Superposition theorem, Reciprocity theorem, Maximum Power Transfer theorem, Applications to DC circuits, Transient Currents Growth and Decay of current in RC and LR circuits.

TextBooks:

1. Introduction to Electrodynamics – D.J.Griffiths (Pearson, 4th edition, 2015) 2.

Foundations of Electromagnetic Theory - Ritz and Milford (Pearson)

Reference Books:

1. Classical Electrodynamics, J.D.Jackson (Wiley).
2. Electricity and Magnetism D.C.Tayal (Himalaya Publishing house)
3. Electricity, Magnetism and Electromagnetic Theory - S.Mahajan and Choudhury (Tata McGraw Hill)
4. Feynman Lectures Vol.2, R.P.Feynman, R.B.Leighton, M.Sands (Pearson)
5. Electricity and Magnetism, J.H.Fewkes and J.Yarwood. Vol.I (Oxford Univ. Press)
6. Classical Electromagnetism, H.C.Verma, Bharati Bhawan

**CORE-I:PAPER-III
LAB:Credit-1
(Minimum of 6 experiments are to be done)**

Use a Multimeter for measuring (a) Resistances, (b) AC and DC Voltages, (c) DC Current, (d) Capacitances, and (e) Checking electrical fuses.

1. To study the characteristics of a series RCC circuit.
2. To determine an unknown Low Resistance using Potentiometer.
3. To determine an unknown Low Resistance using Carey Fosters Bridge.
4. To compare capacitances using De Sauty's bridge.
5. Measurement of field strength Bandits variation in a solenoid (determined B/dx)
6. To verify the Thevenin and Norton theorems.
7. To determine self-inductance of a coil by Anderson's bridge.
8. To study response curve of a Series LCR circuit and determine its (a) Resonant frequency, (b) Impedance at resonance, (c) Quality factor Q, and (d) Bandwidth.
9. To study the response curve of a parallel LCR circuit and determine its (a) Anti-resonance frequency and (b) Quality factor Q.

Reference Books:

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House
2. A Text Book of Practical Physics, I. Prakash and Ramakrishna, 11th Ed., 2011, Kitab Mahal
3. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
4. A Laboratory Manual of Physics for undergraduate classes, D.P. Khandelwal, 1985, Vani Pub.

CORE-I:PAPER-

IV MATHEMATICAL PHYSICS-II: Credit-3

The emphasis of the course is on applications in solving problems of interest to physicists. Students are to be examined on the basis of problems, seen and unseen.

CO-1: Conceptual understanding of Fourier series and its application in periodic function.

CO-2: Understanding the various special functions and its properties.

CO-3: Understanding various polynomials and special integrations.

CO-4: To learn the applications of partial differential equation.

CO-5: To apply the acquired knowledge to solve problems.

UNIT-I

Fourier Series-I: Periodic functions, Orthogonality of sine and cosine functions, Dirichlet Conditions (Statement only), Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients, Complex representation of Fourier series, Expansion of functions with arbitrary period, Expansion of non-periodic functions over an interval, Even and odd functions and their Fourier expansions and Application, Summing of Infinite Series, Term-by-Term differentiation and integration of Fourier Series, Parseval Identity.

UNIT-II

Frobenius Method and Special Functions: Singular Points of Second Order Linear Differential Equations and their importance, Singularities of Bessel's and Laguerre Equations, Frobenius method and its applications to differential equations: Bessel, Legendre and Hermite Differential

Equations, Legendre and Hermite Polynomials: Rodrigues Formula, Generating Function, Orthogonality.

UNIT-III

Polynomials: Simple recurrence relations of Legendre and Hermite Polynomials, Expansion of function in a series of Legendre Polynomials, Associated Legendre Differential Equation, Associated Legendre polynomials, Spherical Harmonics. Spherical Bessel's Function (1st and 2nd kind).

Some Special Integrals: Beta and Gamma Functions and relation between them, Expression of Integrals in terms of Gamma Functions, Error Function (Probability Integral).

UNIT-IV

Partial Differential Equations: Solutions to partial differential equations using separation of variables: Laplace's Equation in problems of rectangular, cylindrical and spherical symmetry. Conducting and dielectric sphere in an external uniform electric field. Wave equation and its solution for vibrational modes of a stretched string.

Text Books:

1. Mathematical Methods for Physicists, G.B. Arfken, H.J. Weber, F.E. Harris. (2013, 7th Edn., Elsevier)
2. Advanced Engineering Mathematics, Erwin Kreyszig (Wiley India)

Reference Books:

1. Mathematical Physics and Special Relativity, M. Das, P. K. Jena and B. K. Dash (Srikrishna Prakashan)
2. Mathematical Physics – H. K. Dass, Dr. Rama Verma (S. Chand Publishing)
3. Mathematical Physics C. Harper (Prentice Hall India)
4. Complex Variable: Schaum's Outlines Series M. Spiegel (2nd Edition, McGraw Hill Education)
5. Complex variables and applications J. W. Brown and R. V. Churchill
6. Mathematical Physics, Satya Prakash (Sultan Chand)
7. Mathematical Physics B. D. Gupta (4th edition, Vikas Publication)
8. Mathematical Physics, B. S. Rajput, Pragati Prakashan

CORE-I:PAPER-IV LAB:Credit-1

The aim of this Lab is to use the computational methods to solve physical problems. Course will consist of lectures (both theory and practical) in the Lab. Evaluation done not on the programming but on the basis of formulating the problem.

Topics

Introduction to Numerical computation software Scilab: Introduction to Scilab, Advantages and disadvantages, Scilab computation software Scilab environment, Command window, Figure window, Edit window, Variables and arrays, Initialising variables in Scilab, Multidimensional arrays, Subarray, Special values, Displaying output data, datafile, Scalar and array operations, Hierarchy of operations, Built-in Scilab functions, Introduction to plotting, 2D and 3D plotting (2), Branching statements and program design, Relational and logical operators, the while loop, for loop, details of loop operations, break and continue statements, nested loops, logical arrays and vectorization (2) User-defined functions, Introduction to Scilab functions, Variable passing in Scilab, optional arguments, preserving data between calls to a function, Complex and Character data, string function, Multidimensional arrays (2) an introduction to Scilab file processing, file opening and closing, Binary I/O functions, comparing binary and formatted functions, Numerical methods and developing the skills of writing a program (2).

Curve fitting, Least square fit Goodness of fit, standard constant Deviation: Ohms law to calculate R, Hooke's law to calculate spring constant

Solution of Linear systems of equations by Gauss elimination Solution method and Gauss Seidel method. Diagonalization matrices, Inverse of a matrix, Eigenvectors, problems: Solution of mesh equations of electric circuits (3 meshes), Solution of coupled spring mass systems (3 meshes).

Solution of ODE First order Differential equation Euler, modified Euler, Runge-Kutta second methods Second order differential equation. Fixed difference method:

First order differential equation

- Radioactive decay
- Current in RC, LC circuits with DC source
- Newton's law of cooling
- Classical equations of motion

Second order Differential Equation

- Harmonic oscillator (no friction)
- Damped harmonic oscillator

- Overdamped
- Criticaldamped
- Oscillatory
- ForcedHarmonicoscillator
- TransientandSteadystatesolution
- ApplyabovetoLCRcircuitsalso

CORE-I:PAPER-

VWAVESANDOPTICS:Credit-3

CO-1:Basicunderstanding of propagation of light, its application and wave nature.CO-2:ToUnderstandtheconcepts of wavemotion.
 CO-3:To Understand the concepts of interference and its application.CO-4:To Understand the concepts of diffraction and its application.CO-5:ToApplytheacquiredknowledgeofoptics inExperiment

UNIT-I

Geometricaloptics:Fermat'sprinciple,reflectionandrefractionatplaneinterface,Matrixformulationof

geometrical Optics, Cardinal points and Cardinal planes of an optical system, Idea of dispersion, Application to thick Lens and thin Lens, Ramsden and Huygens eyepiece. Wave Optics : Electromagnetic nature of light. Definition and properties of wave front Huygens Principle. Temporal and Spatial Coherence. **UNIT-II**

Wave Motion: Plane and Spherical Waves, Longitudinal and Transverse Waves, Plane Progressive (Traveling) Waves, Wave Equation, Particle and Wave Velocities, Differential Equation, Pressure of a Longitudinal Wave, Energy Transport, Intensity of Wave. Superposition of two perpendicular Harmonic Oscillations: Graphical and Analytical Methods, Lissajous Figures (1:1 and 1:2) and their uses, Superposition of Harmonic waves.

UNIT-III

Interference: Division of amplitude and wave front, Young's double slit experiment, Lloyds Mirror and Fresnel's Bi-prism, Phase change on reflection: Stokes treatment, Interference in Thin Films: parallel and wedge-shaped films, Fringes of equal inclination (Haidinger Fringes), Fringes of equal thickness (Fizeau Fringes), Newton's Rings: Measurement of wavelength and refractive index. Interferometer: Michelson's Interferometer - (1) Idea of form of fringes (No theory required), (2) Determination of Wavelength, (3) Wavelength Difference, (4) Refractive Index, and (5) Visibility of fringes, Fabry-Perot interferometer.

UNIT-IV

Fraunhofer diffraction: Single slit, Circular aperture, Resolving Power of a telescope, Double slit, Multiple slits, Diffraction grating, Resolving power of grating. Fresnel Diffraction: Fresnel's Assumptions, Fresnel's Half-Period Zones for Plane Wave, Explanation of Rectilinear Propagation of Light, Theory of a Zone Plate: Multiple Foci of a Zone Plate, Fresnel's Integral, Fresnel diffraction pattern of a straight edge, a slit and a wire.

Text Books:

1. A text book of Optics N. Subrahmanyam and Brij Lal (S. Chand Publishing)
2. Optics - Ajoy Ghatak (McGraw Hill)

Reference Books:

1. Optics - E. Hecht (Pearson)
2. Fundamentals of Optics - F. A. Jenkins and H. E. White (McGraw-Hill)

4. The Physics of Vibrations and Waves - H. J. Pain (John Wiley)

5. Optics P.K.Chakraborty.
6. Principles of Optics - Max Born and Emil Wolf (Pergamon Press)
7. The Physics of Waves and Oscillations - N.K. Bajaj (McGraw Hill)

CORE-I:PAPER-V

LAB:Credit-1

(Minimum 5 experiments are to be done)

1. To determine the frequency of a electric tuning fork by Melle's experiment and verify $T = \lambda f$.
2. To plot the I-D curve and to determine the refractive index of a prism
3. To determine refractive index of the material of a prism using sodium source.
4. To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.
5. To determine wavelength of sodium light using Newton's Rings.
6. To determine wavelength of (1) Na source and (2) spectral lines of Hg source using plane diffraction grating.
7. To determine dispersive power and resolving power of a plane diffraction grating.

8. Reference Books:

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House
2. A Text Book of Practical Physics, I. Prakash and Ramakrishna, 11th Ed., 2011, Kitab Mahal
3. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
4. A Laboratory Manual of Physics for undergraduate classes, D.P. Khandelwal, 1985, Vani

SEMESTER-IV

CORE-I:PAPER- VIMATHEMATICALPHYSICS-III:Credit-3

CO-

1: Understanding and application of Complex function variables.CO-

2: Understanding the concept of Fourier Integral transform.

CO-3: To Understand the properties and application of Fourier integral transformation.CO-

4: To Understand the properties and application of Laplace integral transformation.CO-

5: To Apply the acquired knowledge to solve problems.

UNIT-I

ComplexAnalysis: Brief Revision of Complex Numbers and their Graphical Representation Euler's formula, De Moivre's theorem, Roots of complex Numbers, Functions of Complex Variables, Analyticity and Cauchy-Riemann Conditions, Examples of analytic functions, Singular functions: poles and branch points, order of singularity, branch cuts, Integration of a function of a complex variable, Cauchy's Inequality, Cauchy's Integral formula, Simply and multiply connected region, Laurent and Taylor's expansion, Residues and Residue Theorem, Application in solving Definite Integrals.

UNIT-II

IntegralTransforms-

I: Fourier Transforms: Fourier Integral theorem, Fourier Transform, Examples, Fourier Transform of trigonometric, Gaussian, finite wave train and other functions, Representation of Dirac delta function as a Fourier Integral, Fourier transform of derivatives, Inverse Fourier Transform.

UNIT-III

IntegralTransforms-II: Convolution theorem, Properties of Fourier Transforms (translation, change of scale, complex conjugation), Three dimensional Fourier transforms with examples, Application of Fourier Transforms to differential equations: One dimensional Wave and Diffusion/Heat flow Equations.

UNIT-IV

LaplaceTransforms: Laplace Transforms (LT) of Elementary functions,

Properties of Laplace Transforms: Change of Scale Theorem, Shifting Theorem, LTs of Derivatives and Integrals of Functions, Derivatives and Integrals of Functions, Derivatives and Integrals of LTs. LT of Unit Step function, Dirac Delta function, Periodic Functions, Inverse LT, Application of Laplace Transforms to Differential Equations: Damped Harmonic Oscillator, Simple Electrical Circuits.

Text Books:

1. Mathematical Methods for Physicists, G.B. Arfken, H.J. Weber, F.E. Harris (2013, 7th Edn., Elsevier)

LAB: Credit-1

Scilab based simulations (XCos) experiments based on Mathematical Physics problems like

- . Solves simple differential equations like:

$$\frac{dy}{dx} = e^{-x} \quad \text{with } y(x=0)=0$$

$$\frac{dy}{dx} + e^{-x} = x^2 \quad \text{with } y(x=0)=0$$

$$\frac{d^2y}{dx^2} + 2 \frac{dy}{dx} = -y \quad \text{with } y(x=0)=0, y'(x=0)=1$$

$$\frac{d^2y}{dx^2} + e^{-x} \frac{dy}{dx} = -y \quad \text{with } y(x=0)=0, y'(x=0)=1$$

- . Direct Delta Function:

Evaluate $\int_{-3}^3 dx \frac{x=3}{\sqrt{2\pi a^2}} e^{-\frac{(x-2)^2}{2\sigma^2}}$, for $\sigma=0.1, 0.01, 0.001$ and show that it tends to 5.

- . Fourier Series:

Program to sum; evaluate the Fourier Coefficients of a given periodic function (Square Wave)

- FrobeniusMethodandSpecialFunctions:

$$\int_{-1}^1 d\mu \ P_n \mu \ P_m \mu = \frac{2}{2n+1} \delta_{m,n}$$

Plot $P_n(x)$, Legendre polynomial of degree n , and $J_n(x)$, Bessel function of first kind. Show Recursion relation.

Calculation of error for each data point of observations recorded in experiments done in previous semester(s) (choose any two)

Calculation of least square fitting manually without giving weightage to error. Confirmation of least square fitting of data through computer Programme.

- Evaluation of trigonometric functions e.g. $\sin \theta$, Given Bessel's function at N points, find its value at an intermediate point.

Complex analysis: Calculate $\int \frac{dx}{x^2+2}$ and check it with computer integration.

- Integral transform: FFT of e^{-x^2}

CO-3:Basicunderstandingofsignalgeneratorsanditsanalysis

CO-4.:Basicunderstandingofdigitalinstrumentsand their applications.

CO-5:ToApplythe acquiredknowledge ofdifferent electronicmeasurement-based instrumentsinExperiments

UNIT-I

BasicofMeasurement:Instrumentsaccuracy,precision,sensitivity,resolutionrangeetc.Errorsinmeasurementsand loadingeffects.

Multimeter: Principles of measurement of dc voltage and dc current, ac voltage, ac current and resistance.Specificationsofamultimeterandtheirsignificance.

ElectronicVoltmeter:Advantage over conventional multimeter for voltage measurement withrespect to input impedance and sensitivity. Principles of voltage,measurement(blockdiagramonly).SpecificationsofanelectronicVoltmeter/Multimeterandtheirsignificance.

ACmillivoltmeter:Typeof ACmillivoltmeters:Amplifier-rectifier, andrectifier-amplifier.Blockdiagramacmillivoltmeter,specificationsandtheirsignificance.

UNIT-II

CathodeRayOscilloscope:BlockdiagramofbasicCRO.ConstructionofCRT,Electrongun,electrostatic focusingandacceleration(Explanationonly no mathematical treatment), brief discussion onscreenphosphor,visualpersistenceandchemicalcomposition.Timebaseoperation,synchronization.Frontpanel controls.SpecificationsofaCROandtheirsignificance.

ApplicationsofCRO:(1)Studyof WaveForm, (2)MeasurementofVoltage, Current,FrequencyandPhaseDifference.

Specialfeaturesof dualtrace,introductiontodigitaloscilloscope,probes.DigitalstorageOscilloscope:Blockdiagramandprincipleofworking.

UNIT-III

Signal Generators and Analysis Instruments: Block diagram, explanation and specifications of low frequency signal generators, pulse generator, and function generator, Brief idea for testing, specifications, Distortion factor meter, wave analysis.

UNIT-IV

Digital Instruments: Principle and working of digital meters, Comparison of analog and digital instruments, Characteristics of a digital meter, Working principles of digital voltmeter.

Digital Multimeter: Block diagram and working of a digital multimeter, Working principle of time interval, frequency and period measurement using universal counter/frequency counter, time-base stability, accuracy and resolution.

CORE-I:PAPER-IX

LAB: Credit-1

The tests of lab skills will be of the following test items:

1. Use of an oscilloscope.
2. CRO as a versatile measuring device.
3. Circuit tracing of laboratory electronic equipment.
4. Use of Digital multimeter/ VTM for measuring voltages.
5. Circuit tracing of laboratory electronic equipment.
6. Winding a coil/transformer.
7. Study the layout of receiver circuit.
8. Troubleshooting a circuit.
9. Balancing of bridges.

Laboratory Exercises:

1. To observe the loading effect of a multimeter while measuring voltage across a low resistance and high resistance.

2. To observe the limitations of a multimeter for measuring high frequency voltage and currents.
3. To measure Q of a coil and its dependence on frequency, using a Q-meter.
4. Measurement of voltage, frequency, time period and phase angle using CRO.
5. Measurement of time period, frequency, average period using universal counter/frequency counter.
6. Measurement of rise, fall and delay times using a CRO.
7. Measurement of distortion of a RF signal generator using distortion factor meter.
8. Measurement of R, L and C using a LCR bridge/universal bridge.

Open Ended Experiments:

1. Using a Dual Trace Oscilloscope
2. Converting the range of a given measuring instrument (voltmeter, ammeter) More emphasis should be given on hands-on experiments.

Text Books:

1. A Text Books book of electrical technology - B.L. Theraja (S.Chand Publishing)
2. Digital circuits and systems Venugopal (Tata McGraw Hill)

Reference Books:

1. Digital Electronics - Subrata Ghoshal (Cengage Learning)
2. Electronic Devices and Circuits - S. Salivahanan and N.S. Kumar (Tata Mc-Graw Hill)
3. Electronic Devices - Thomas L. Floyd (Pearson)

Additional Reference Books for Practical papers:

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop (Asia Publishing House)
2. Practical Physics - B.B. Swain (Kitab Mahal)
3. Practical Physics - B. Ghosh (Vol. I and II)
4. A Laboratory Manual of Physics for Undergraduate Classes, D.P. Khandelwal (Vani Publication)
5. B.Sc. Practical Physics - C.L. Arora (S. Chand Publishing)
6. B.Sc. Practical Physics - H. Singh and P.S. Hemne (S. Chand Publishing)

CORE-I:PAPER-X
NuclearandParticlePhysics:Credit-3

CO-1:Understanding the properties of atoms in electric and magnetic field.CO-2: Understanding the concept Nuclear physics.

CO-3: Conceptual understanding nuclear models and nuclear reactions.CO-4: Conceptual understanding of particle physics.

CO-5: To Apply the acquired knowledge in conducting the experiments.

UNIT-I

Atoms in Electric and Magnetic Fields: Electron angular momentum. Space quantization, Electron Spin and Spin Angular Momentum, Larmor's Theorem, Spin Magnetic Moment, Stern Gerlach Experiment, Vector Atom Model, L-S and J-J coupling, Zeeman Effect, Electron Magnetic Moment and Magnetic Energy, Gyromagnetic Ratio and Bohr Magnetron. Atoms in External Magnetic Fields: Normal and Anomalous Zeeman Effect, Paschenback and Stark-Effect (qualitative Discussion only).

UNIT-II

Nuclear Physics- : Nuclear composition, charge, size, shape, mass and density of the nucleus; Nuclear angular momentum; Nuclear magnetic dipole moment; Electric quadrupole moment; Mass defect; Packing fraction and Binding energy; Stability of nuclei (N vs Z curve), Binding energy curve. semiempirical mass formula; Nuclear Forces: General concept of nuclear force; Yukawa Meson field theory of nuclear forces; Properties of Nuclear forces. Radioactive disintegration; Properties of alpha, beta, gamma rays; law of radioactive decay; successive radioactive decay; radioactive equilibrium; Radioisotopes; application of radioactivity (Agriculture, Medicinal, Industrial and Archaeological).

UNIT-III

Nuclear models: Liquid Drop model; Shell model; magic number in the nucleus; Alpha decay; Alpha particle spectra; Gamow's theory of Alpha decay; Beta decay: Shape of Beta ray spectrum; Explanation of Beta decay on the basis of Neutrino and Antineutrino hypothesis; Fermi theory of Beta decay; Selection rules; Gamma ray emission,

Nuclear reactions: Kinds of Nuclear reactions; Nuclear reaction kinematics; Q-value; Compound Nucleus and concept of direct reactions; Conservation laws; Nuclear reaction cross - sections. Nuclear energy: Nuclear Fission; Chain reaction and Critical Mass; Nuclear Reactors and its basic components; Nuclear Fusion; Condition for the maintained Fusion reactions; Energy production instars; Fusion reaction in Sun, Principle of atomic bomb and hydrogen bomb.

UNIT-IV

ParticlePhysics

Classification of particles-antiparticles and their interactions; Conservation laws; Charges; Isospin; Baryon number; Lepton number; Strangeness; Hypercharge; Parity; Charge conjugation; CPT theorem; Conservation laws; Quark as the building blocks of Hadrons; Quark Model; Colour degree of freedom, Symmetry Classification of elementary particles; Higgs Boson Particle (God particle), elementary idea on Large Hadron Collider (LHC), The future of universe, Dark matter and dark energy.

Text Books:

4. Modern Physics-Serway (CENGAGE Learnings)
5. Physics of Atoms and Molecules Bransden and Joachim (Pearson India)
6. Atomic and Nuclear Physics-A. B. Gupta (New Central)
7. Theoretical Nuclear Physics, J. M. Blatt and V. F. Weisskopf (Springer)

CORE-I:PAPER-X LAB: Credit-1

(Minimum 4 experiments are to be done)

1. Study of photoelectric effect.
2. Basics of GM counter characteristics and counting statistics.
3. Study of Gamma ray spectroscopy by SCA and MCA.
4. To determine the Planck's constant using LEDs of at least 4 different colours.
5. To determine the value of e/m by (a) Magnetic focusing or (b) Bar magnet.
6. To set up the Millikan oil drop apparatus and determine the charge of an electron.

Reference Books:

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Books Book of Practical Physics, I. Prakash and Ramakrishna, 11th Edn, 2011, Kitab Mahaal

CORE-I:PAPER-XI
DIGITAL SYSTEMS: Credit-3

CO-1: To Understand IC's and scales of Integration, Digital Circuits and their realization, Applications

CO-

2: Build strong knowledge about Boolean Algebra, Truth tables, Equivalent Circuits, Theory and application of CRO.

CO-3: Gain a clear understanding of Data processing circuits, Arithmetic Circuits, different types of Timers: IC555

CO-4: To Explain the knowledge of computer organization, Shift registers and

counters. CO-5: To Apply the acquired knowledge to
realize various types of circuits in experiment

UNIT-1

Integrated Circuits (Qualitative treatment only): Active and Passive Components, Discrete components, Wafer Chip, Advantages and Drawbacks of ICs, Scale of Integration: SSI, MSI, LSI and VLSI (basic idea and definitions only), Classification of ICs, Examples of Linear and Digital ICs.

Digital Circuits: Difference between Analog and Digital Circuits, Binary Numbers, Decimal to Binary and Binary to Decimal Conversation, BCD, Octal and Hexadecimal numbers, AND, OR and NOT Gates (realization using Diodes and Transistor), NAND and NOR Gates as Universal Gates, XOR and XNOR Gates and application as Parity Checkers.

UNIT-II

Boolean algebra: De Morgan's Theorems, Boolean Laws, Simplification of Logic Circuit using Boolean Algebra, Fundamental Products, Idea of Minterms and Maxterms, Conversion of truth table into Karnaugh Map and SOP and POS simplification, Universal logic implementation (NAND & NOR).

UNIT-III

Data Processing Circuits: Basic Idea of Multiplexers, De-multiplexers, Decoders, Encoders.

Arithmetic Circuits: Binary Addition. Binary Subtraction using 2s complement. Half and Full Adders. Half and Full Subtractors, 4-bit binary Adder/Subtractor.

Timers: IC 555: block diagram and application is Astable multivibrator and Monostable multivibrator.

UNIT-IV

Introduction to Computer Organization: Input/output Devices, Data storage (idea of RAM and ROM), Computer memory, Memory organization and addressing, Memory Interfacing, Memory Map.

Shift registers: Serial-in-serial-out, Serial-in-Parallel-out, Parallel-in-Serial-out and Parallel-in-Parallel-out. Shift Registers (only up to 4 bits)

Counters (4 bits): Ring Counter, Asynchronous counters, Decade Counter, Synchronous Counter.

Text Books:

1. Digital Circuits and Logic design: Samuel C. Lee (Prentice Hall)
2. Digital Principles and Applications - A.P. Malvino, D.P. Leach and Saha (Tata McGraw)

5. Concepts of Electronics D. C. Tayal (Himalaya Publishing house)
6. Digital Systems and Application, Gupta Kumar, Pragati Prakashan

CORE-I:PAPER-XI

LAB: Credit-1

(Minimum 6 experiments are to be done)

1. To measure (a) Voltage, and (b) Time period of a periodic waveform using CRO and to test a Diode and Transistor using a Millimeter.
2. To design a switch (NOT gate) using a transistor.

3. To verify and design AND, OR, NOT and XOR gates using NAND gates.
4. Half Adder, Full Adder and 4-bit binary Adder.
5. Half Subtractor, Full Subtractor, Adder-Subtractor using Full Adder I.C.
6. To build Flip-Flop (RS, Clocked-RS, D-type and JK) circuits using NAND gates.
7. To design a stable multivibrator of given specifications using 555 Timer.
8. To design a monostable multivibrator of given specifications using 555 Timer.

Reference Books:

1. Basic Electronics: A Text Book slab manual, P.B.Zbar, A.P.Malvino, M.A.Miller, 1994, Mc-Graw Hill.
2. OP-Amps and Linear Integrated Circuit, R.A.Gayakwad, 4th edition, 2000, Prentice Hall.
3. Electronic Principle, Albert Malvino, 2008, Tata Mc-Graw Hill. Electronic Devices and circuit Theory, R.L. Boylestad and L.D. Nashelsky, 2009, Pearson.

CORE-I:PAPER-XII

QUANTUM MECHANICS AND APPLICATIONS: Credit-3

CO-1: To understand Properties and physical interpretation of wave function and its application, knowledge in probability current density, significance of momentum space transformation and time dependent Schrödinger equation.

CO-

2: To explain Time independent Schrödinger equation, Eigenvalue, Eigenfunction, generalized solution of stationary states, knowledge in wave function and discrete energy level.

CO-3: Basic knowledge in quantum mechanical operators, Eigen value and Eigen function, Uncertainty relation and Gaussian wave packet.

CO-

4: Acquire the knowledge in application of Schrödinger equation in different potential barriers, concept of simple harmonic oscillator.

CO-5: Apply the acquired knowledge to solve various numerical problems.

UNIT-I

Schrodinger equation: Time dependent Schrodinger equation, Properties of Wave Function, Physical interpretation of wave function, Wave function of a free particle, Normalization, Probability current and probability current densities in three dimensions, Linearity and Superposition Principle, Wave Packet, Fourier Transform Theorem, Momentum space wave function and its significance, Representation of position vector in momentum space. Schrodinger equation in momentum space.

UNIT-II

Time Independent Schrodinger equation in 1-D, 2-D and 3-D, Hamiltonian, stationary states and energy Eigenvalues, expansion of an arbitrary wavefunction as a linear combination of energy Eigenfunctions,

General solution of the time dependent Schrodinger equation in terms of linear combinations of stationary states. General Discussion of Bound states in an arbitrary potential: Continuity of wave function, Boundary condition and emergence of discrete energy levels.

UNIT-III

Operators: Operators, Commutator Algebra, Position, Momentum, Angular Momentum and Energy operators, Hermitian Operators, Expectation Value, Expectation values of position and momentum, Ehrenfest Theorem, Eigenvalues and Eigenfunctions of Hermitian Operator, Energy Eigen Spectrum, Degeneracy, Orthogonality of Eigenfunctions, Linear Dependence, Orthogonalisation, Uncertainty Relation - Uncertainty product, minimum uncertainty wave packet - Gaussian Wave Packet.

UNIT-IV

Application to one dimensional problem - One dimensional infinitely rigid Box - Energy Eigen values and Eigen functions, normalization, quantum dots as an example, Quantum mechanical scattering and tunneling in one dimension across a Potential Step and Rectangular Potential Barrier, Finite Square well potential, Quantum mechanics of simple Harmonic Oscillator - Energy Levels and Energy Eigenfunctions, ground state, zero point energy.

Text Books:

1. Introduction to Quantum Theory David Park (Dover Publications)
2. Introduction to Quantum Theory, D.J. Griffiths (Pearson)
3. Quantum Mechanics: Concepts and applications, N. Zettili, Wiley

Reference Books:

1. Quantum Mechanics, Theory and applications A. Ghatak and S. Lokanathan (McMillan India)
2. Quantum Mechanics - G. Aruldas (Prentice Hall of India)
3. Quantum Physics - S. Gasiorowicz (Wiley)
4. Quantum Mechanics - G.R. Chatwal and S.K. Anand
5. Quantum Mechanics - J.L. Powell and B. Craseman (Narosa)
6. Introduction to Quantum Mechanics M. Das and P.K. Jena (Shri Krishna Publication).

CORE-I:PAPER-XII LAB:Credit-1

Use C/C++/Scilab for solving the following problems based on Quantum mechanics like (Use finite difference method, matrix method, ODE Solver method in all cases)

1. Solve the Schrödinger equation for the ground state and the first excited state of the Hydrogen atom:

$$\frac{d^2\psi}{dr^2} = A(r) \psi(r), A(r) = \frac{2m}{\hbar^2} [V(r) - E], V(r) = -\frac{e^2}{r}$$

Where, 'm' is the reduced mass of the electron. Obtain the energy eigenvalues and plot the corresponding wave functions. Remember that the ground state energy of the hydrogen atom is $\sim -13.6 \text{ eV}$. Take $e=3.795 \sqrt{(\text{eV}\text{\AA})}$, $\hbar c=1973 \text{ (eV\AA)}$ and $m=0.511 \times 10^6 \text{ eV/c}^2$.

2. Solve the S-Wave radial Schrödinger equation for an atom:

$$\frac{d^2\psi}{dr^2} = A(r) \psi(r), A(r) = \frac{2m}{\hbar^2} [V(r) - E],$$

Where, 'm' is the reduced mass of the system (Which can be chosen to be the mass of an electron), for the screened Coulomb potential: $V(r) = -\frac{e^2}{r} e^{-r/a}$

Find the energy (in eV) of the ground state of the atom to an accuracy of three significant digits.

Also; plot the corresponding wave function. Take $e=3.795 \text{ (eV\AA)}$, $\hbar c=1973 \text{ (eV\AA)}$ and $m=0.511 \times 10^6 \text{ eV/c}^2$, and $a=3 \text{\AA}, 5 \text{\AA}, 7 \text{\AA}$. The ground state energy is expected to be above -12 eV in all three cases.

3. Solve the S-Wave radial Schrödinger equation for a particle of mass m :

$$\frac{d^2\psi}{dr^2} = A(r) \psi(r), A(r) = \frac{2m}{\hbar^2} [V(r) - E]$$

For the anharmonic oscillator potential: $V(r) = \frac{kr^2}{2} + \frac{br^3}{3}$.

Find the ground state energy (in MeV) of the particle to an accuracy of three significant digits.

Also, plot the corresponding wave function. Choose $m=940 \text{ MeV/C}^2$, $k=100 \text{ MeV/fm}^2$, $b=(0, 10, 30) \text{ MeV/fm}^3$. In these units, $c=197.3 \text{ MeV fm}$. [The ground state energy is expected to lie between 90 and 110 MeV for all three cases].

4. Solve the S-Wave radial Schrödinger equation for the vibrations of hydrogen molecule:

$$\frac{d^2\psi}{dr^2} = A(r) \psi(r), A(r) = \frac{2m}{\hbar^2} [V(r) - E]$$

Where, 'm' is the reduced mass of the two-atom system for the Morse potential

$$V(r) = D(e^{-2\alpha r} - e^{-\alpha r})$$

Where $r=r-r_0$.

Find the lowest vibrational energy (in MeV) of the molecule to an accuracy of three significant digits. Also plot the corresponding wave functions for the choices given below:

$$m=940 \times 10^6 \text{ ev/c}^2, D=0.755501 \text{ ev}, \alpha=1.44,$$

$$r_0=0.131349 \text{\AA}, m=940 \times 10^6 \text{ ev/c}^2, D=0.755501 \text{ ev}, \alpha=1.44, r_0=0.131$$

$$349 \text{\AA}$$

SEMESTER–VI

CORE–I:PAPER-XIII SOLIDSTATEPHYSICS:Credit-3

CO-1:Tounderstand theConceptofcrystalstructureandproperties,X-rayDiffraction,Bragg'sandLaue'scondition.

CO-2:Conceptual understandingof Lattice vibration,Einsteinand Debyespecific heat theoriesof solids,knowledgeinBandtheory,Kroning-PennymodelandHallEffect.

CO-3:UnderstandingtheConceptinmagneticanddielectricpropertiesofmaterials.

CO-4 : Basic knowledge on LASER and its generation, types. Conceptual understanding ofsuperconductivityanditsype,London'sEquation,PenetrationDepthandBCStheory.

CO-5:ToApplytheacquiredknowledgeinexperiments.

UNIT-I

CrystalStructure:Solids,AmorphousandCrystallineMaterials,Lattice translation Vectors,Lattice withaBasis.CentralandNon-CentralElements.UnitCell,MillerIndices,Typesof Lattices,ReciprocalLattice,

Brillouin zones, Diffraction of X-rays by crystals, Bragg's Law, Laue's Condition, Atomic and Geometrical Factor.

UNIT-II

Elementary Lattice Dynamics: Lattice Vibrations and Phonons: Linear, Monoatomic and Diatomic

Chains, Acoustical and Optical Phonons, Qualitative Description of the phonon spectrum in solids, Dulong and Petit's Law, Einstein and Debye theories of specific heat of solids, r^3 Law.

Elementary band theory: Kroning-Penny model of band Gap, Conductor, Semiconductor (P and N type) and insulator, Conductivity of Semiconductor, mobility, Hall Effect, Measurement of conductivity (four probe method) and Hall Co-efficient.

UNIT-III

Magnetic Properties of Matter: Dia-, Para-, Ferri- and Ferro-magnetic Materials, Classical Langevin's theory of dia and Paramagnetic Domains, Curie's law, Weiss Theory of Ferromagnetism and Ferromagnetic Domains, Discussion of B-H Curve, Hysteresis and Energy Loss.

Dielectric Properties of Materials: Polarization Local Electrical Field atan Atom, Depolarization Field, Electric Susceptibility, Polarizability, Clausius-Mosotti Equation, Classical theory of Electronic Polarizability.

UNIT-IV

Lasers: Einstein's A and B co-efficients, Metastable States, Spontaneous and Stimulated Emissions, Optical Pumping and population Inversion, Three Level and Four Level Lasers, Ruby Laser and He-Ne Laser.

Superconductivity: Experimental Results, Critical Temperature, Critical magnetic field, Meissner effect, Type-I and Type-II Superconductors, London's Equation and Penetration Depth, Isotope effect, Idea of BCS theory (No derivation).

Text Books:

1. Introduction to Solid State Physics - Charles Kittel (Wiley India)
2. LASERS: Fundamentals and Applications - Thyagarajan and Ghatak (McMillan India)

Reference Books:

1. Solid State Physics - N.W. Ashcroft and N.D. Mermin (Cengage)
2. Solid State Physics - R.K. Puri and V.K. Babbar (S. Chand Publication)
3. Solid State Physics - S.O. Pillai (New Age Publication)
4. Lasers and Non-linear Optics - B.B. Laud (Wiley Eastern)

5. Elements of Solid State Physics - J.P. Srivastava (Prentice Hall of India)
6. Elementary Solid State Physics - Ali Omar (Addison Wiley)
7. Solid State Physics, Gupta and Kumar, Pragati Prakashan.

CORE-I:PAPER-XIII

LAB:Credit-1

(Minimum 4 experiments are to be done)

1. Measurement of susceptibility of paramagnetic solution (Quinck's Tube-Method)
2. To measure the Magnetic susceptibility of Solids.
3. To measure the Dielectric Constant of dielectric Materials with frequency
4. To determine the Hall coefficient of a semiconductor sample.
5. To draw the BH curve of Fe using solenoid and to determine the energy loss from Hysteresis
6. To measure the band gap of a given semiconductor by four-probe method.

Reference Books:

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House .
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers.
3. A Text Books Book of Practical Physics, I. Prakash and Ramakrishna, 11 Ed., 2011 , Kitab Mahal
4. Elements of Solid State Physics, J.P. Srivastava, 2nd Ed., 2006, Prentice-Hall of India.

CORE-I:PAPER-XIV

ELECTROMAGNETIC THEORY: Credit-3

CO-1: Physical significance of Maxwell's Equations and its application to free space, Lorentz and Coulomb gauge transformation, Poynting theorem, concept of energy density.

CO-

2: Analysis of Maxwell's equations in different media and physical significance of relaxation time, skin depth, Electrical conductivity of ionized gases, plasma frequency.

CO-

3: Basic understanding of polarization of EM wave, and different types of crystals, Phase Retardation Plates and Rotatory Polarization.

CO-

4: Conceptual understanding of EMW application in bounded media, plane interface, dielectric media, Brewster's law, TIR, Evanescent wave, metallic reflection.

CO-5: To Apply the acquired knowledge for visualize basic concept of phenomenon of

lightinvariousexperiments

UNIT-I

Maxwell Equations: Maxwell's equations, Displacement Current, Vector and Scalar Potentials, Gauge Transformations: Lorentz and Coulomb Gauge, Wave Equations, Plane Waves in free space and characteristics, Poynting Theorem and Poynting Vector, Electromagnetic (EM) Energy Density, Physical Concept of Electromagnetic Field Energy Density.

UNIT-II

EM Wave Propagation in Unbounded Media: Plane EM waves through vacuum and isotropic dielectric medium, transverse nature of plane EM waves, refractive index and dielectric constant, wave impedance, Propagation through conducting media, relaxation time, skin depth, Electrical conductivity of ionized gases, plasma frequency, refractive index, skin depth, applications of propagation through ionosphere.

UNIT-III

Polarization of Electromagnetic Waves: Description of Linear, Circular and Elliptical Polarization, uniaxial and biaxial crystals, light propagation in uniaxial crystal, double refraction, polarization by double refraction, Nicol Prism, Ordinary and extraordinary refractive indices, Production and detection of Plane, Circularly and Elliptically polarized light,

Phase Retardation Plates: Quarter-Wave and Half-Wave Plates. Babinet's Compensator and its Uses, Analysis of Polarized Light.

Rotatory Polarization: Optical Rotation, Biot's Laws for Rotatory Polarization, Fresnel's Theory of optical rotation, Calculation of angle of rotation, Experimental verification of Fresnel's theory, Specific rotation, Laurent's half-shade polarimeter.

UNIT IV

EM Wave in Bounded Media: Boundary conditions at a plane interface between two media, Reflection and Refraction of plane waves at plane interface between two dielectric media, Laws of Reflection and Refraction, Fresnel's Formulae for perpendicular and parallel polarization cases, Brewster's law, Reflection and Transmission coefficients, Total internal reflection, evanescent waves, Metallic reflection (normal Incidence)

Text Books:

1. Introduction to Electrodynamics, D.J. Griffiths (Pearson).
- Principles of Optics - Max Born and E. Wolf.

Reference Books:

1. Classical Electrodynamics by J.D. Jackson.
2. Foundation of electromagnetic theory: Ritz and Milford (Pearson).

3. Electricity and Magnetism: DCTayal (Himalaya Publication)
4. Optics: A.K. Ghatak
5. Electricity and Magnetism: Chattopadhyaya, Rakshit (New Central)
6. Electromagnetic Theory, Gupta and Kumar, Pragati Prakashan

CORE-I:PAPER-XIV
LAB:Credit-1

(Minimum 4 experiments are to be done):

1. To verify the law of Malus for plane polarized light.
2. To determine the specific rotation of sugar solution using Polarimeter.
3. To analyze elliptically polarized Light by using a Babinet's compensator.
- 4.. To determine the refractive index of liquid by total internal reflection using Wollaston's air-film.
5. To determine the refractive Index of (1) glass and (2) a liquid by total internal reflection using a Gaussian eyepiece.
6. To study the polarization of light by reflection and determine the polarizing angle for air-glass interface.
7. To verify the Stefan's law of radiation and to determine Stefan's constant.
8. To determine the Boltzmann constant using V-I characteristics of PN junction diode.

Reference Books:

1. Advanced Practical Physics for students, B.L. Flint and H.T. Worsnop, 1971, Asia Publishing House.
2. Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4th Edition, reprinted 1985, Heinemann Educational Publishers
3. A Text Books Book of Practical Physics, I. Prakash and Ramakrishna, 11 Ed., 2011, Kitab Mahal Electromagnetic Field Theory for Engineers and Physicists, G. Lehner, 2010, Springer

CORE –I:PAPER-
XVSTATISTICALMECHANICS:Credit-
3

CO-1: Understanding the concept of ensembles and its partition function, phase

space and

thermodynamic relations, MB distribution law.

CO-

2: Conceptual understanding of addition of entropy, Sackur-Tetrode equation, Law of equipartition of Energy and its application.

CO-3: Basic postulates and different distribution of Fermi and Dirac particles and B-E condensation.

CO-4: Basic knowledge in thermal and Blackbody radiation, Concept of different laws of radiation and their experimental verification.

CO-5: Apply the acquired knowledge for analyzing the laws of radiation and different distribution functions using computational analysis.

UNIT-I

Classical Statistics-I: Macrostate and Microstate, Elementary Concept of Ensemble, Microcanonical, Canonical and Grand Canonical ensemble, Phase Space, Entropy and Thermodynamic Probability, Maxwell-Boltzmann Distribution Law, Partition Function.

UNIT-II

Classical Statistics-II : Thermodynamic Functions of an Ideal Gas, classical Entropy Expression, Gibbs Paradox, Sackur-Tetrode equation, Law of equipartition of Energy (with proof)- Application to Specific Heat and its Limitations, Thermodynamic Functions of a two energy level system, Negative Temperature.

UNIT-III

Quantum Statistics: Identical particles, macro states and microstates, Fermions and Bosons, Bose Einstein distribution function and Fermi-Dirac distribution function. Bose-Einstein Condensation, Bose deviation from Planck's law, Effect of temperature on Fermi-Dirac distribution function, degenerate Fermi gas, Density of States Fermi energy.

UNIT-IV

Radiation: Properties of Thermal Radiation, Blackbody Radiation, Pure Temperature dependence, Kirchhoff's law, Stefan Boltzmann law: Thermodynamic proof, Radiation Pressure, Wein's Displacement law, Wien's distribution Law, Saha's Ionization Formula, Rayleigh Jeans Law, Ultra Violet catastrophe.

Planck's Law of Blackbody Radiation: Experimental verification, Deduction of

(1) Wien's Distribution Law, (2) Rayleigh-Jeans' Law, (3) Stefan-Boltzmann Law, (4) Wein's Displacement Law from Planck's Law.

Text Books:

1. Introduction to Statistical Physics by Kerson Huang (Wiley).
2. Statistical Physics, Berkeley Physics Course, F. Reif (Tata McGraw-Hill)

Reference Books:

1. Statistical Mechanics, B.K. Agarwal and Melvin Eisner (New Age International)
2. Thermodynamics, Kinetic Theory and Statistical Thermodynamics: Francis W. Sears and Gerhard L. Salinger (Narosa)
3. Statistical Mechanics: R.K. Pathria and Paul D. Beale (Academic Press)
4. Statistical Mechanics: Sharma and Satyal, Kalyani Publishing
5. Basic Statistical Mechanics, Gupta and Kumar, Pragati Prakashan

CORE-I:PAPER-XV LAB: Credit-1

Use C/C++/Scilab for solving the problems based on Statistical Mechanics like

1. Plot Planck's law for Black Body radiation and compare it with Wein's.
2. Law and Raleigh-Jeans Law at high temperature (room temperature) and low temperature.
3. Plot Specific Heat of Solids by comparing (a) Dulong-Petit law, (b) Einstein distribution function, (c) Debye distribution function for high temperature (room temperature) and low temperature and compare them for these two cases.
4. Plot Maxwell-Boltzmann distribution function versus temperature.
5. Plot Fermi-Dirac distribution function versus temperature.
6. Plot Bose-Einstein distribution function versus temperature.

Reference Books:

1. Elementary Numerical Analysis, K.E. Atkinson, 3rd Edn. 2007, Wiley India Edition
2. Statistical Mechanics, R.K. Pathria, Butterworth Heinemann: 2nd Ed., 1996, Oxford University Press.
3. Thermodynamic, Kinetic Theory and Statistical Thermodynamics, Francis W. Sears and Gerhard L. Salinger, 1986, Narosa.

1. Modern Thermodynamics with Statistical Mechanics, Carl S. Helrich, 2009, Springer
2. Simulation of ODE/PDE Models with MATLAB, OCTAVE and SCILAB: Scientific and Engineering Applications: A. Vande Wouwer, P. Saucez, C. V. Fernández. 2014 Springer ISBN: 978-3319067896
3. Scilab by Example: M. Affouf, 2012. ISBN: 978-1479203444
4. Scilab Image Processing: L.M. Surhone. 2010, Beta Script Pub., ISBN: 978613345927

MULTIDISCIPLINARY COURSE

1. NanoMaterialsandApplications(3credits) Theory:2credits

CO-1: Basic understanding of nanostructured shape, application of

Schrodinger

equation in nanostructured

CO-2: Understanding of nanomaterials synthesis

CO-3: Understanding of nanomaterials different Characterization CO-

4: Understating of different optical properties of nanomaterials CO-

5: Apply the above concepts in Experiments

UNIT1:NANOSCALESYSTEMS:

Lengthscales in physics, Nanostructures: 1D, 2D and 3D nanostructures (nano dots, thin films, nanowires, nanorods), Band structure and density of states of materials at

nanoscale, Size Effects in nano systems, Quantum confinement: Applications of Schrodinger equation-Infinite potential well, potential step, potential box, quantum confinement of carriers in 3D, 2D,

1D nanostructures

and its consequences. (10 Lectures)

UNIT2:

SYNTHESIS OF NANOSTRUCTURE MATERIALS: Top down and Bottom up approach, Photolithography.

Ball milling. Gas phase condensation. Vacuum deposition. Physical vapor deposition (PVD): Thermal evaporation, E-beam evaporation, Pulsed Laser deposition.

Chemical vapor deposition (CVD). Sol-

Gel. Electrodeposition. Spray pyrolysis. Hydrothermal synthesis. Preparation through colloidal methods. MBE growth of quantum dots. (8 Lectures)

UNIT3:
CHARACTERIZATION: X-Ray Diffraction. Optical Microscopy.

Scanning Electron Microscopy. Transmission Electron Microscopy. Atomic Force Microscopy. Scanning Tunneling Microscopy. (8 Lectures)

UNIT4:

OPTICAL PROPERTIES: Coulomb interaction in nanostructures. Concept of dielectric constant for nanostructures and charging of nanostructure. Quasi-particles

and excitons. Excitons in direct and indirect bandgap semiconductor nanocrystals. Quantitative treatment of quasi-particles and excitons, charging effects. Radiative processes: General formalization-absorption, emission and luminescence. Optical properties of heterostructures and nanostructures. (14 Lectures)

Reference books:

2. S.K. Kulkarni, Nanotechnology: Principles & Practices (Capital Publishing Company).
3. K.K. Chatopadhyay and A.N. Banerjee, Introduction to Nanoscience and Technology (PHI Learning Private Limited).
4. Richard Booker, Earl Boysen, Nanotechnology (John Wiley and Sons).
5. M. Hosokawa, K. Nogi, M. Naita, T. Yokoyama, Nanoparticle Technology Handbook (Elsevier, 2007).
6. Bharat Bhushan, Springer Handbook of Nanotechnology (Springer-Verlag, Berlin, 2004).

LABORATORY: 1 credit

1. Synthesis of metal nanoparticles by chemical route.
2. Synthesis of semiconductor nanoparticles.
3. Surface Plasmon study of metal nanoparticles by UV-Visible spectrophotometer.
4. XRD pattern of nanomaterials and estimation of particle size. 5. To study the effect of size on color of nanomaterials.
6. Growth of quantum dots by thermal evaporation.
7. Fabricate a thin film of nanoparticles by spin coating (or chemical route) and study transmittance spectra in UV-Visible region.

Reference Books:

1. C.P. Poole, Jr. Frank J. Owens, Introduction to Nanotechnology (Wiley India Pvt. Ltd.).
2. S.K. Kulkarni, Nanotechnology: Principles & Practices (Capital Publishing Company).

2.BIOPHYSICS, Theory:3credits

CO-1:BasicfundamentalsoflivingorganismanditsinteractionsindomainsofPhysicsinbiologyCO-

2:Understatingofheattransferinbiomaterialsanditsmechanism

CO-3:Diversifyingofthermal,statisticalphysicsinbiologicaldomain.

CO-4:UnderstatingfluidmechanismsinlivingorganisminthedomainofPhysics

UNIT1:

Building Blocks&Structureof LivingState: Atoms and ions, moleculesessentialfor life, whatislife. Livingstateinteractions: Forcesandmolecularbonds,electric&thermalinteractions,electricdipoles,ca simirinteractions,domainsofphysicsinbiology.(18

Lectures)UNIT2:

HeatTransferinbiomaterials:HeatTransferMechanism,TheHeatequation,Joule heatingof tissue. LivingStateThermodynamics:Thermodynamicequilibrium,firstlawofthermodynamicsandconservationofenergy. Entropy and second law of thermodynamics,Physicsofmanyparticlesystems,Two statesystems, continuous energydistribution, Compositesystems, Casimircontributionoffreeenergy,Proteinfoldingandunfolding.(19Lectures)

UNIT3:

Opensystemsandchemical thermodynamics: Enthalpy, Gibbs FreeEnergyandchemical potential,activationenergyandrateconstants,enzymaticreactions, ATPhydrolysis&synthesis,Entropyofmixing, Thegrandcanonicalensemble,Hemoglobin. Diffusionand transportMaxwell-Boltzmannstatistics,Fick'slawofdiffusion,sedimentationofCell Cultures,diffusioninacentrifuge, diffusioninan electric field, Lateraldiffusionin membranes,Navierstokes equation, low Reynold'sNumberTransport,Activeandpassivemembranetransport.(19Lectures)

UNIT4

Fluids: Laminarand turbulent fluid flow,Bernoulli'sequation,equationof continuity,ventureeffect,Fluiddynamicsofcirculatorysystems,capillaryaction.Bioenergetics

andMolecularmotors:Kinesins,Dyneins, and microtubuledynamics,Brownianmotion, ATPsynthesisinMitochondria, Photosynthesis in Chloroplasts, Light absorption in biomolecules, vibrationalspectraofbio-biomolecules.(19Lectures)

Reference Books:

1. IntroductoryBiophysics,J.Claycomb,JQPTran,Jones&BartelettPublishers
2. AspectsofBiophysics,HughesW,JohnWileyandSons.
3. EssentialsofBiophysicsbyPNarayanan,NewAgeInternational

3. Introduction to Spectroscopy: Theory: 3 credits

CO-1: Basic understanding of atomic models and its spectroscopy nature CO-

2: Conceptual understanding of Spectra of Alkaline elements

CO-3: Understanding the basic of X-ray and its applications CO-

4: Understanding molecular spectroscopy

UNIT1:

Vector Atomic Model: Inadequacies of

Bohr and Bohr-

Sommerfeld atomic models w.r.t. spectrum of Hydrogen atom (fine structure of H-alpha line). Modification is due to the finite mass of the nucleus and the Deuterium spectrum. Vector atomic model (Stern-Gerlach experiment included) and physical & geometrical interpretations of various quantum numbers for single & many valence electron systems. LS & JJ couplings, spectroscopic notation for energy states, selection rules for transition of electrons and intensity rules for spectral lines. Fine structure of H-alpha line based on vector atomic model. (10 lectures)

UNIT2:

Spectra of Alkali & Alkaline Elements: Spectra of alkali elements: Screening constants for s, p, d & f orbitals; sharp, principle, diffuse & fundamental Series; doublet structure of spectra and fine structure of Sodium D line. Spectra of alkaline elements: Singlet and triplet structure of spectra. (6 lectures)

UNIT3:

X-rays & X-Ray Spectra: Nature & production, Continuous X-ray spectrum & Duane-Hunt's law, Characteristic X-ray spectrum & Mosley's law, Fine structure of Characteristic X-ray spectrum, and X-ray absorption spectrum. (7 lectures)

UNIT4:

Molecular Spectra: Discrete set of a molecule's electronic, vibrational and rotational energies. Quantization of vibrational energies, transition rules and pure vibrational spectra. Quantization of rotational energies, transition rules, pure rotational spectra and determination of inter nuclear distance. Basics of UVVisible & photoluminescence spectroscopy (7 lectures)

Reference Books:

SKILLENHANCEMENTCOURSE

SEC-1

RENEWABLEENERGYANDENERGYHARVESTING:Credit-2

Theory:30Lectures

CO-1:Basicunderstandingofalternativesourcesofenergy.

CO-2:Conceptualunderstandingandimportanceofsolarcell,charaterization

CO-3: Understating the energy harvesting and its applications using wind and piezoelectric

materialCO-4: Understatingthe electromagnetic energyharvestinganditsapplications

UNIT-1

FossilfuelsandAlternateSourcesofenergy:

Fossil fuels and Nuclear Energy, their limitation, need of renewable energy, non-conventional energysources.An overview of

developmentsinOffshoreWindEnergy,TidalEnergy,Waveenergysystems, Ocean Thermal Energy Conversion, solar energy, biomass, biochemical conversion, biogasgeneration,geothermalenergytidalenergy,Hydroelectricity.

UNIT-2

Solarenergy:

Solarenergy,itsimportance,storageofsolarenergy,solarpond,non-convectivesolarpond,applications of solar pond and solar energy, solar water heater, flat plate collector, solar distillation,solar cooker, solar green houses, solar cell, absorption air conditioning. Need and characteristics of photovoltaic(PV)systems,PVmodelsand equivalent circuits,andsuntrackingsystems.

UNIT-3

WindEnergy harvesting:

Fundamentals of Wind energy, Wind Turbines and different electrical machines in wind turbines,Powerelectronic interfaces, and gridinterconnectiontopologies.

Piezoelectric Energy harvesting: Introduction, Physics and characteristics of piezoelectric effect,materials and mathematical description of piezoelectricity, Piezoelectric parameters and modelingpiezoelectric generators,Piezoelectric energyharvestingapplications,Humanpower.

UNIT-4

ElectromagneticEnergyHarvesting:

Linear generators, physics mathematical models, recent applications 42 Carbon captured technologies,cell,batteries,powerconsumptionEnvironmental issuesandRenewable sourcesofenergy,sustainability.

ReferenceBooks:

SEC-2

AppliedOpticsandPhotonics:Credit-3

CO-1: Basic understanding of different sources and detectors, principles.CO-

2:Conceptualunderstandingoffrequencyfilteringanditsapplication.

CO-3: Basic concept of holography, and its application in microscopy and interferometry.CO-

4:Basic knowledge in Optical fiber, and its principle and application in sensors.

CO-5:ApplytheacquiredknowledgeinExperiments

Theory:Credit2

Unit-1

SourcesandDetectors

Lasers,Spontaneousandstimulatedemissions, Theoryoflaseraction, Einstein's coefficients, lightamplification, Characterizationoflaserbeam, He-Ne laser, Semiconductor Lasers.

Fourier Optics and Electron Microscopy U

nit-2

Concept of spatial Frequency Filtering, Fourier Transforming property of a thin lens.

Electron Microscope, Working Principle, Types of electron microscope: TEM, SEM (BASICS), Applications of electron microscope, Advantages and limitations of electron microscope

Unit-

3 Holography

y

Basic principle and theory: coherence, resolution, Types of holograms, white light reflection hologram, application of holography in microscopy, interferometry.

Unit-4

Photonics: Fiber Optics

Optical fibers and their properties, Principal of light propagation through a fiber, The numerical aperture, Attenuation in optical fiber and attenuation limit, Single mode and multimode fibers, Fiberoptics sensors.

LAB: Credit-1

1. Experiment on Lasers:

To find the width of the wire or width of the slit using diffraction pattern obtained by a He-Ne or solid state laser.

2. Experiments on Semiconductor Sources and Detectors

- V-I characteristics of LED
- Photovoltaic Cell

3. Experiments on Holography and Interferometry.

- Constructing a Michelson interferometer or a Fabry Perot interferometer.
- Constructing a Mach-Zender interferometer.

4. Experiments on Photonics: Fiber Optics

- To measure the numerical aperture of an optical fiber.
- To study the variation of the bending loss in a multimode fiber.
- To determine the power loss at a splice between two multimode fiber

Reference Books:

Introduction to Quantum Information and Computing Ce rdit-03 (02 (Theory)+01(Lab.))

CO-

1: Basic understanding of Quantum Mechanics, linear algebra of Quantum Mechanics and Quantum Entanglement.

CO-2: Basic ideas about Quantum Gates and circuits, states and qubits. CO-

3: To familiar with Quantum Algorithm and Fourier Transform.

CO-4: Understanding Shor's algorithm and Grover's algorithm.

CO-5: To apply the required knowledge in quantum computing labs.

Unit-1

Introduction to Quantum Mechanics

History and development of quantum mechanics, Key principles: superposition, entanglement, and wave-particle duality.

Linear Algebra for Quantum Computation

Vectors and

vectorspaces, Inner product, outer product, and Hilbert spaces Eigenvalues and eigenvectors.

Quantum Entanglement

Definition and properties of entanglement, Bell states and EPR pairs, Applications of entanglement, Quantum Teleportation.

Unit-2

Quantum Gates and Circuits

Basic quantum gates: Pauli-

X, Y, Z, Hadamard, Phase, and CNOT, Quantum circuits and their representation, Deutsch-Josza algorithm.

Quantum States and Qubits

The concept of qubits, Representing qubits: Dirac notation and Bloch sphere, Quantum state measurements.

Unit-3

Introduction to Quantum Algorithms

Classical vs. quantum algorithms, Complexity classes: P, NP, and BQP.

Quantum Fourier Transform (QFT)

Mathematical foundation of QFT, Implementation of QFT in quantum circuits, Applications of QFT.

Unit-4

Shor's Algorithm

Problem statement: integer factorization, Steps of Shor's algorithm, Practical implementation and significance.

Grover's Algorithm

Problem statement: unstructured search, Steps of Grover's algorithm, Implementation and applications.

Reference Books:

1. Textbook: "Quantum Computation and Quantum Information" by Michael A. Nielsen and Isaac L. Chuang.
2. J. Preskill, "Lectures notes on Quantum information and computation".
3. Online platform: Qiskit (IBM Quantum Experience).

Quantum Computing: Computation Lab Credit: 01

SL. No.	Topic	Expected Outcome
1.	Installation and exploration of Qiskit, IBMQ platform. Introduction to other significant quantum computation toolkits (Pennylane, Quimb, QuTiP etc).	1. Implementation of basic gates (Pauli, Hadamard, RX, RY, RZ, CNOT, CZ, Controlled Rotation) using Qiskit. 2. Building basic circuits with single and Entangling gates. 3. Understanding quantum, measurement, visualization 4. Building Bell state and measuring it. 5. Running a circuit through accessible NISQ computer.

2.	Complex gate designing, and simple Algorithms and protocols.	<ol style="list-style-type: none"> Toffoli gate through CNOT, H, S, T, and Qiskit in-built methods. Multi-controlled, multi-target gates through Toffoli and Qiskit MTMC method. Designing quantum teleportation protocol with Bell state. Designing imperfect quantum teleportation with non-maximally entangled state Incorporating noise models (available in Qiskit for different devices), and see how noise changes the results. Implementation of Deutsch-Jozsa Algorithm.
3.	Quantum Fourier Transform	<ol style="list-style-type: none"> Single qubit quantum Fourier transform (H gate). Three qubit quantum Fourier transform. Multiquantum Fourier transform (Understanding exponential gate complexity). Approximate quantum Fourier transform with polynomial complexity (Establishing error-complexity trade off).
4.	Quantum Phase Estimation	<ol style="list-style-type: none"> Ideal case phase estimation algorithm designing (where phase can be written using exactly t bits) Approximate case phase estimation and understanding probability of obtaining certain accuracy
5.	Shor's Factorization Algorithm	<ol style="list-style-type: none"> Reduction of factorization to order finding. Implementation of factorization algorithm for 9 and 15.
6.	Quantum Search Algorithm	<ol style="list-style-type: none"> Designing quantum search through Grover's algorithm. Devising algorithm for quantum counting. Understanding $O(\sqrt{N})$ complexity for quantum search.

ASTRONOMY AND ASTROPHYSICS

Credit:3

CO-

1: Basic ideas about celestial mechanics and astrometry. CO-2:

To understand basic tools of astronomy.

CO-3: Basic ideas in solar system.

CO-4: To understand the basics of stellar parameters.

CO-5: To apply the basic knowledge of Astronomy and Astrophysics for doing some experiments.

UNIT1: 8 Hours

Celestial Mechanics and Astrometry: The celestial Sphere, Positions of stars, Proper motions of stars and planets, Distances of nearby stars.

UNIT2: 8 Hours

Tools of Astronomy: Telescopes: Basic Optics, Optical Telescopes, Radio Telescopes, Infrared, Ultraviolet, X-ray, and Gamma-Ray Astronomy – detectors and observatories
Gravitational Waves detectors and Neutrino detectors All-Sky Surveys and Virtual Observatories.

UNIT3: 8 Hours

The Solar System: The Sun, The Physical Processes in the solar system, The Terrestrial and the Giant Planets, Formation of Planetary Systems.

UNIT4: 8 Hours

Basic Stellar Parameters: The brightness of the stars, Colour-magnitude diagrams (The HR diagrams), The luminosities of the stars, Angular radii of stars, Effective temperatures of stars, Masses and radii of stars: Binary stars, Search for Extrasolar Planets

ReferenceBooks:

1. Introduction to Stellar Astrophysics, Volume 1, Basic stellar observations and data, By Erika Bohm-Vitense, Cambridge University Press
2. An Introduction to Modern Astrophysics, Second Edition, By Carroll B.W., Ostlie D.A., Pearson Addison Wesley.
3. "Astrophysics for Physicists" by Arnab Rai Choudhuri, Cambridge University Press, 2010
4. Galactic Astronomy: Structure and Kinematics by Mihalas & Binney, W.H. Freeman & Co Ltd; 2nd Revised edition 1981.
5. An Introduction to Astrophysics: by Baidyanath Basu; Prentice-Hall of India, -New Delhi-110001

ASTRONOMY AND ASTROPHYSICS LAB: List of Experiments

1. To become familiar with the astronomical objects visible to naked eye in the night sky using the software Stellarium.
2. To become familiar with the Constellations in the night sky using the software Stellarium.
3. To identify the retrograde motion of Mars with respect to the Background stars.
4. To identify some of the prominent spectral lines in the spectrum of our sun.
5. To get familiar with the spectra of different stars.
6. To extract coordinates of a star assuming a telescope in equatorial mount. You will also learn the concepts of sidereal time.

ValueAddedCourseCOMPUTATIONAL MATERIALSMODELLING

Credit-4

CO-1: Basic understanding of Molecular Dynamic.

CO-2: Conceptual understanding of statistical Mechanics

CO-3: Conceptual understanding of different inputs script in molecular dynamic (LAMMPS) CO-

4: Basic understanding of density functional theory

CO-5: Apply the acquired knowledge solving problems using software tools . LAMMPS, Quantum Expresso

Theory:3credit

Unit1

Introduction to the course, Some applications of MD simulations, Introduction to Bravais lattices and constructing simple crystals with MATLAB, Introduction to symmetry – 1, Symmetry Elements – 1, Symmetry elements -2, Plane groups and their Hermann-Mauguin (HM) symbols, Glide reflection; Examples of writing point group symbols; Wyckoff positions, generating 2D crystal with MATLAB using Bilbao crystallography website, Symmetry of space groups, Hermannmauguin symbols of space groups, Translational symmetry operators

Unit2

The Space groups, Generation of crystals, Generation of monoclinic lattice, Introduction to Statistical Mechanics, Introduction to phasespace, Introduction to phase average and time average, Canonical ensemble; Partition function.

Unit3

Basic introduction to MD, input script for LAMMPS 1, Input script for LAMMPS 2, Input script for LAMMPS 3, Input script for LAMMPS 4.

Unit4

Density Functional Theory: Introduction, Kohnshamequation (KS orbitals, eigenvalues), Solving KSeq uation, self-consistency, Vibrational principle, Constraints, Direct diagonalization.

Computational Materials Modelling Lab: 1 credit

LAMMPS exercises 1, LAMMPS exercises 2, LAMMPS exercises 3, LAMMPS exercises 4, LAMMPS exercises 5, DFT with Quantum Espresso: Si2, Convergence Test, Si2 band, Si7 vacancy

Mathematical Methods in Physics

CO1: Understanding of Complex Variables and Contour Integration: Gain a comprehensive understanding of complex variables and contour integration techniques, including their applications in mathematical analysis and physics.

CO2: Learning Tensors for Physics: Acquire knowledge and proficiency in working with tensors, a fundamental mathematical tool in physics used to describe physical quantities and their transformations.

CO3: Understanding Group Theory: Develop a deep understanding of group theory and its role in physics, including applications in symmetry analysis and quantum mechanics.

CO4: Learning Special Functions for Applications in Physical Problems: Master specialized functions commonly used in physics to solve complex problems, enhancing problem-solving skills and expanding mathematical techniques.

Unit-1

Complex Variables: Analytic functions, Contour integrals, Cauchy's integral theorem, Laurent's series, singular points, residues and the Residue Theorem, Evaluation of real definite and indefinite integrals by contour integration, indented semi-circular contour, evaluation of single and multi-valued functions, branch points and branch cuts, Contour integration involving branch point.

Unit-2

Tensors: Introduction, Types of tensor, Invariant tensor, epsilon tensor, Pseudo tensor, the algebraoftensor, Quotient law,MetricTensor, Covariant derivative oftensor, Fundamental Tensor,Cartesian tensor,Christoffelsymbol.

Unit-3

GroupTheory:Definitionsofgroups, subgroupsandclasses, Isomorphism, Homomorphism,Cayley'stheorem,Grouprepresentations,Orthogonalitytheorem, characters,Orthogonalityrelation for group character, Character table, Preliminary idea about infinite group, calculation ofgenerator,CalculationofgeneratorassociatedwithS.U.(2)andSO(3)group,

Unit-4

SpecialFunctions:LegendrePolynomials, generatingfunctions, Recurrence formulae,OrthogonalitypropertiesofLegendre'spolynomialof1stkind,Bessel generatingfunction,Bessel functionof1stand2ndKind, Recurrenceformulae, Orthogonality properties of Bessel'spolynomials,SphericalBesselfunctions,Fourierand Laplace transformation.

ClassicalMechanics

CO1:Enhancecomprehensionofrigidbodykinematics.CO

2:MastertheHamiltonianformalism.

CO3:Deepenunderstandingofcanonicaltransformationsinvariousphysicalscenarios.

CO4:Graspconceptsrelatedtosmalloscillations.

Unit-1

KINEMATICSOF RIGIDBODY MOTION:

Independent coordinates of a rigid body, Orthogonal transformations, Eulerian angles, infinitesimal rotations, rate of change of vector, Coriolis force, angular momentum and kinetic energy of motion about a point, inertial tensor and the moment of inertia, Eigen values of Inertial tensor and the principal axis transformation, methods of solving rigid body problems and Euler's equations of motion, torque free motion of a rigid body. Heavy symmetrical top with one point fixed.

Unit-2

HAMILTONIAN FORMULATION: Calculus of Variations and Euler-Lagrange's Equation, Brachistochrone Problem, Hamilton's Principle, Extension of Hamilton's Principle to Nonholonomic Systems, Legendre Transformation and the Hamilton Equations of Motion, Physical Significance of Hamiltonian, Derivation of Hamilton's Equations of Motion from a Variational Principle, Routh's Procedure, Principle of Least Action

Unit-3

CANONICAL TRANSFORMATIONS: Canonical Transformation, Types of Generating Function, conditions for canonical transformation, Integral Invariance of Poincaré, Poisson Bracket, Poisson's Theorem, Lagrange Bracket, Poisson and Lagrange Brackets as Canonical Invariant, Infinitesimal Canonical transformation and Conservation Theorems, Liouville's Theorem, Hamilton-Jacobi Theory: Hamilton-Jacobi Equation for Hamilton's Principal Function, Harmonic Oscillator and Kepler problem by Hamilton-Jacobi Method, Action-Angle Variables for completely Separable System, Kepler Problem in Action-Angle Variables.

Unit-4

SMALL OSCILLATION: Problem of Small Oscillations, Example of linear triatomic molecule and two coupled oscillator, General Theory of Small Oscillations, Normal Coordinates and Normal Modes of Vibration.

Test Books:

1. Classical Mechanics by H. Goldstein (Addison-Wesley)

Reference books:

4. Classical Mechanics by Landau and Lifshitz (Butterworth)

QUANTUMMECHANICS-1

CO1: To comprehend the postulates and general formalism of quantum

mechanics. CO2: To acquire knowledge of quantum dynamics.

CO3: To grasp the concepts of rotational and orbital angular momentum.

CO4: To understand spin angular momentum, addition of spin, and Clebsch-Gordan Coefficient

Unit-1

GENERAL PRINCIPLES OF QUANTUM MECHANICS:

Postulates of Quantum Mechanics and meaning of measurement, Operators and their expectation values, Dirac Notations, Linear vector space, Ket and Bra vectors, Scalar product of vectors and their properties, Dirac delta function, linear operators, Adjoint operators, Unitary Operators, Expectation values of dynamical variables and physical interpretation of Hermitian operators, Eigen values and eigen vectors, orthonormality of eigenvectors, probability interpretation, Degeneracy, Schmidt method of orthogonalization, Expansion theorem, Completeness and closure properties of the basis set, Coordinate and momentum representations, compatible and incompatible observables, Commutator algebra, uncertainty relation as a consequence of non-commutability, minimum uncertainty wave packet, Representations of Ket and Bra vectors and operators in matrix form, Unitary transformation of basis vectors and operators.

Unit-2

QUANTUM DYNAMICS:

Time evolution of quantum states, Time evolution operator and its properties, Schrödinger, Heisenberg and Interaction picture, Equations of motion, Operator method solution of Harmonic oscillator problem, Matrix representation and time evolution of creation and annihilation operator.

Unit-3

ROTATION AND ORBITAL ANGULAR MOMENTUM

Rotation Matrix, Orbital angular momentum operators as generators of rotation, L_x , L_y , L_z and L_2 and their Commutation relations, Raising and Lowering operators (L_+ and L_-), L_x , L_y , L_z and L_2 in Spherical Polar coordinates, Eigen values and Eigen functions of L_z and L_2 (operator method), Matrix representation of L_x , L_y , L_z and L_2 .

Unit-4

SPINANGULARMOMENTUM:

Spin $\frac{1}{2}$ particles, Pauli spin matrices and their properties, Eigen values and Eigen functions, Spin and rotations. Total angular momentum: Total angular momentum J , Eigen value problem of J_z and J^2 , Angular momentum matrices, Addition of angular momentum and C. G. coefficients for the states with (i) $j_1 = \frac{1}{2}$ and $j_2 = \frac{1}{2}$ (ii) $j_1 = 1$ and $j_2 = \frac{1}{2}$.

Textbooks:

1. "Quantum Mechanics: Concepts and Applications" by Noureddine Zettile John Wiley and Sons.

Reference Books:

2. "Quantum Mechanics" E. Merzbacher, 2nd Ed., John Wiley & Sons.
3. "Quantum Physics", S. Gasiorowicz John Wiley.
4. "A Text Book of Quantum Mechanics" by P.M. Mathews and Venkatesan, Tata McGraw Hill.
5. Introduction to Quantum Mechanics, by D.J. Griffiths, 2nd edition, Pearson Publications.
6. Lectures on Quantum Mechanics, Ashok Das, University of Rochester, USA (second edition; Hindustan Book Agency)

LABORATORY: COMPUTATIONAL PHYSICS: 4 CREDITS

The main goal of this laboratory is to utilize programming languages such as C/C++, Fortran, Matlab,

and Scilab to tackle straightforward problems in the fields of classical mechanics, quantum mechanics, and statistical mechanics.

1. Introduction to the programming language (e.g. C/C++/Fortran/Matlab/Scilab). The introduction is accompanied by examples in the following general areas. (a) Sorting Algorithms -- selection sort, Quicksort etc. (b) Solution of equation -- Newton's method, Secant method etc. (c) Simple numerical integrations -- Trapezoidal rule, Simpson 1/3 rule.
2. Classical mechanics (2nd order ODE, initial value problems). Euler method, Modified-Euler (predictor-corrector) method, Runge-Kutta method, Leapfrog method, Verlet method, Velocity Verlet method, each with and without velocity dependent drag terms, harmonic oscillator with damping, forced one, realistic projectile motion with air drag, realistic planetary orbit calculation.
3. Quantum Mechanics (2nd order ODE, boundary value and eigenvalue problems). Shooting method and Numerov's method, examples of bound state calculation for 1D wells,

- quantum harmonic oscillators. Eigenvalue problem in matrix form (finite dimensional basis), and exact (Lanczos) diagonalization, Variational calculation with orthogonal basis states. Time-dependent Schrodinger equation, wave equation.
4. Statistical Mechanics (Stochastic and Monte Carlo Methods). Uniform random number generation, Random walk and diffusion, Monte Carlo Integration -- advantage in higher dimension, error analysis. Importance sampling and detailed balance. Generation of random numbers from a Gaussian distribution -- Box-Miller method, using central limit theorem, Sampling points from arbitrary distributions -- Metropolis sampling and examples.

Reference Textbooks:

1. Computational Physics, N.J. Giordano and H. Nakanishi, Pearson Prentice Hall (2006)
2. Introduction to Computational Physics, Pao Tang, Cambridge University Press.
3. Computational Physics, S.E. Koonin and D.C. Meredith, Addison-Wesley Publishing Company.
4. Computational Physics, J.M. Thijssen, Cambridge University Press

Sem.-VIII

Classical Electrodynamics

CO 1: To understand the covariance formulation of electrodynamics through topics such as Lorentz transformations, Scalars, Vectors, Tensors, and the Inhomogeneous Wave Equation.

CO 2: To explore the concepts of Lienard-Wiechert potential and the field of a uniformly moving electron, as well as the propagation of electromagnetic waves in rectangular waveguides.

CO 3: To learn about radiation from accelerated charges.

CO 4: To comprehend radiation, scattering, and dispersion phenomena in the context of electrodynamics.

UNIT 1:

a. Covariant formulation of electrodynamics:

Lorentz transformation; Scalars, vectors and Tensors; Maxwell's equations and equations of continuity in terms of A_μ and J_μ ; Electromagnetic field tensor and its dual; Covariant form of Maxwell's equations; Lagrangian for a charged particle in presence of external electromagnetic field and Maxwell's equation as Euler-Lagrange equations.

b. The Inhomogeneous Wave equation:

Wave equations for potentials, solution by Fourier analysis, Radiation field, Radiation energy, Hertz potential, Computation of radiation fields by Hertz method, electric dipole radiation, multipole-radiation.

Unit-II

- a. **Lienard-Wiechart potential and Field of a uniformly moving electron:** Lienard-Wiechart potential, Fields of a charge in uniform motion, Direct solution of the wave equation, Convection potential, Virtual photon concept.
- b. Waveguides, Propagation of electromagnetic waves in rectangular waveguides.

Unit-III

Radiation from Accelerated Charges: Radiation from an accelerated charge, Fields of an accelerated charge, radiation at low velocity, Case of velocity parallel to acceleration, radiation from circular orbits, Radiation with no restrictions on the acceleration or velocity, Classical cross section for bremsstrahlung in a Coulomb field, Cherenkov radiation.

Unit-IV

Radiation, scattering and dispersion:

Radiative damping of a charged harmonic oscillator, forced vibrations, scattering by an individual free electron, scattering by a bound electron, absorption of radiation by an oscillator, equilibrium between an oscillator and a radiation field, effect of a volume distribution of scatters, scattering from a volume distribution, Rayleigh scattering, the dispersion relation.

Text Book:

1. "Classical Electricity and Magnetism" by Wolfgang K.H. Panofsky and Melba Philips, Second Edition.

Reference books:

1. "Classical Electrodynamics", Jackson JD, John Wiley.
2. "Introduction to Electrodynamics", Griffiths DJ, Prentice Hall.

QUANTUMMECHANICS-II

CO1: Master the principles of solving motion in a spherically symmetric field. CO2: Acquire proficiency in utilizing approximate methods.

CO3: Comprehend advanced techniques like the Variational method, W. K. B. method, and Time-dependent perturbation theory.

CO4: Gain insight into Time-dependent perturbation theory and the scattering of identical particles.

Unit-1

Motion in a spherically symmetric field:

The hydrogen atom, Reduction to equivalent one body problem, radial equation, Energy eigenvalues and eigenfunctions, Degeneracy, Radial probability distribution, free-particle problem, Expression of plane waves in terms of spherical waves. Bound states of a 3-D square well.

Unit-2

Approximate methods:

stationary perturbation theory, Rayleigh Schrodinger method for non-degenerate case, first and second order perturbation, anharmonic oscillator, general theory for the degenerate case, removal of degeneracy, linear Stark effect, normal Zeeman effect.

Unit-3

Variational method: Ground State, First Excited State and Second Excited State of H-atom One-Dimensional Harmonic Oscillator, and He-atom.

W.K.B. method: Connection formulas, Bohr-Sommerfeld quantization rule, Harmonic oscillator and cold emission.

Time-dependent perturbation theory:

Transition probability, constant and harmonic perturbation, Fermi Golden rule

Unit-4

Scattering amplitude and scattering cross section:

Born approximation, application to Coulomb and screened Coulomb potentials. Partial wave analysis for scattering, optical theorem, scattering from a hard sphere, resonant scattering from a square well potential. Identical particles, Symmetric and antisymmetric wave function, Scattering of identical particles.

TextBook:

1. "Quantum Mechanics: Concepts and Applications" by Noureddine Zettile John Wiley and Sons.

Reference Books:

1. "Quantum Mechanics", L.I. Schiff 3rd Ed, McGraw Hill Book Co.
2. "Quantum Mechanics" E. Merzbacher, 2nd Ed., John Wiley & Sons.
3. "Quantum Physics", S. Gasiorowicz John Wiley.
4. "A Text Book of Quantum Mechanics" by P.M. Mathews and Venkatesan, Tata McGraw Hill.
5. Introduction to Quantum Mechanics, by D.J. Griffiths, 2nd edition, Pearson Publications.

Electronics

CO1: Enhance understanding of Network Analysis, Bipolar Junction Transistors, and Operational Amplifiers

.

CO2: Acquire knowledge of Oscillator circuits and their functionality. CO3

: Master the concepts of Digital Circuits and their applications.

CO4: Comprehend the operation and usage of Optoelectronic Devices in electronic systems.

Unit-1

Network Analysis: Superposition principle, Thevenin and Norton Theorems, BJT,

FET, MOSFET: characteristic, biasing-parameter analysis, Feedback Circuits.

Operational Amplifiers: The differential amplifier, D.C. and A.C. signal analysis, integral amplifier, rejection of common mode signals, CMMR, The operational amplifier, input and output impedances, Application of operational Amplifiers unit gain buffer, summing, integrating amplifier, Comparator, Operational amplifiers as differentiator.

Unit-2

Oscillator circuits: Feedback criteria for oscillation, Nyquist criterion, Phase shift, Wien-Bridge oscillator, Crystal controlled oscillator

Unit-3

Digital Circuits: Logic fundamentals, Boolean theorem, logic gates: AND, OR, NOT, NOR, NAND, XOR, and EXNOR. RTL, DTL and TTL logic, Flip-flop, RS and JK-Flipflop, A/D and D/A Convertors

Unit-4

Optoelectronics Device:

Principle of optical sources, Source material, Choice of materials, Internal and external quantum efficiency of L.E.D., Structures, Types of L.E.D.: Surface emitting L.E.D., Edge emitting L.E.D., Modulation capability, emission pattern, power bandwidth product, laser Diode Modes, Threshold condition, resonant frequency, Laser Diode Structure, Brief description of principle of optical detectors, Photomultipliers P.I.N. and A.P.D. configuration, Solar Cell.

Textbooks and reading materials

1. Electronic fundamental and application by J.D. Ryder, PHI, Learning Pvt Ltd.
2. Electronics: Circuits and Analysis, D.C. Dubey, Alpha Science

2. Electronics principles – Albert Malvino, Tata McGraw-Hill Edition
3. Modern Digital Electronics – R.P. Jain, Tata McGraw-Hill Edition

Laboratory: Optics and Modern Physics Lab

(4 credit) The main objectives of this laboratory course are

e:

1. To apply the principles of optics, electronics, and modern physics in conducting experiments.
2. To gain a better understanding of theoretical principles through hands-on experimentation.

N.B: Following is the list of some experiments however, the college can add any other experiments as per the convince.

Optics & Modern Physics:

1. Determination of Boltzmann constant using V-I characteristics of PN diode.
2. Determination of Planck's constant using LEDs at least four colors.
3. Determination of e/m by Bar magnet / magnetic focussing
4. Study of photo-electric effect.
5. Study of diffraction pattern of single and double slits using laser source and determine ion of its wavelength.
6. Study the electrical resistance as a function of temperature.
7. Experiments with Michelson interferometer: Determination of A and α Thickness of mica sheet

8. Fabry Perot interferometer Polarization Experiments Babinet compensatorEdsarr- ButlerbandsQuarterwaveplateMallusLawStudyofellipticalpolarizedlight
9. ConstantDeviationSpectrographyCalibrationZeeman effect
10. BabinetQuartzSpectrography
11. Anyothersuitableexperiments
12. Anyotherexperimentsthatmaybesetupfromtimetotime.
